WEBANCOR is a registered Trade Mark

ISO 9001

Web & Core Technologies Inc. received its **ISO 9001 Certification** in 1999 after going through the usual training period and audits. We found that most of the procedures required by the **ISO** rating were already in use at **WEB & CORE TECHNOLOGIES INC.** and had been for a number of years.

Every shaft, chuck and bowed roll, manufactured by us has a serial number stamped into it, that provides us the route to the complete manufacturing record and parts list.

We were completely dismayed that after a couple of years and many tens of thousands of dollars spent, the **ISO 9001** certification has to be upgraded. This meant many more thousands of dollars had to be spent for new training, manuals and audits.

Web & Core Technologies Inc. along with many of its customers and suppliers have decided that this would be more good money wasted. We have decided that the requirements of the **ISO 9001** would be still adhered to, and we would streamline the rest of the requirements, getting rid of redundant items, as would happen with the upgrade.

We are no longer registered as a **ISO 9001** company as we are not paying the registration and audit fees. **WEBANCOR** along with many others found that the costs did not justify the end results. It appeared to be more of a “money grab” for the certification and audit companies.

WEB & CORE TECHNOLOGIES INC. will continue to guided in the “spirit” of the **ISO** process, as we have in the past and times prior to our certification.

WEB & CORE TECHNOLOGIES INC.
