WEBANCOR L/R CORE CHUCKS "THE SAFE CHUCK"

WEBANCOR TYPE L/R CORE CHUCKS are one of the **SAFEST** core chucks on the market today.

- 1)The air bladder is safely protected from being cut, by inner leaves and the outer sleeve, when slicing material off the core.
- 2)**The inner leaves will not allow the outer sleeve to "BLOW OUT" exposing the operator to harm. The inner leaves limit the expansion.**
- 3)The outer "rubber" sleeve is easily and cheaply replaced. It can grip all types of cores, metal as well as plastic and fibre.
- 4)Optional "TIE TUBE" connectors allow two or more chucks to be inflated/deflated from either end. This must be specified at time of order.
- 5)Split collar clamp locking with steel threads on bolt sockets. Set screw also available. **Single split is shipped if double split is not specified.**
- 6)Full diameter split "billet" clamp is stronger than cutaway cast clamps.
- 7)Easily replaceable bladder assembly c/w valve.
- 8)CHUCKS are manufactured for strength, from "Billet Aluminum" not from a casting.
- 9)Type L/R chucks available for 150 mm, and 6" ID. cores. Bore sizes up to 3" L/R type available for 6" DIA and up. Smaller core sizes available in other models.
